Web design

An electronic website or electronic address or website or website, is a set of web pages, that is, hypertexts generally accessible by the HTTP protocol or by HTTPS on the internet. The set of all existing public sites make up the World Wide Web. They are reached from a URL that points to the main page and usually reside in the same directory as a server. The pages are organized within the site in an observable hierarchy in the URL.

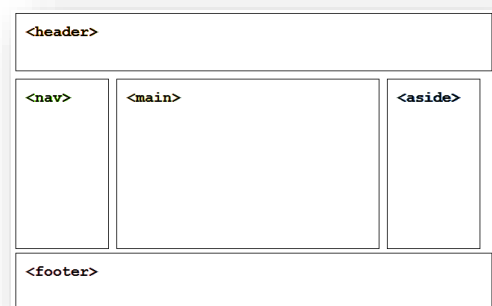

The first web sites that were created had a simple format, they must now contain very basic and objective information about what they wanted to communicate. This site is designed with a .HTML extension that converts elements in the editor to objects such as tables, images and text and space formats.

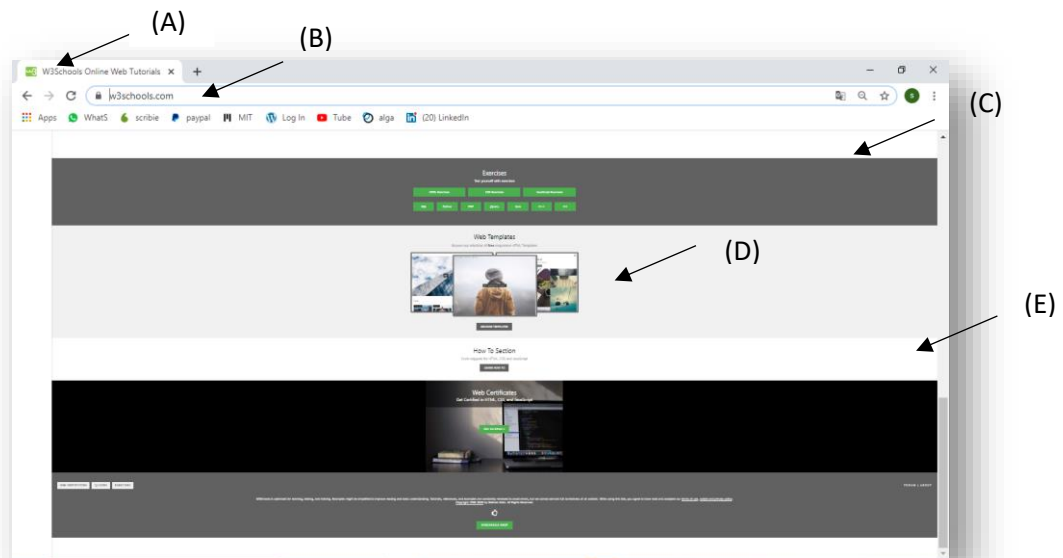

A simple page must be developed for this project primer. Creating a called index.HTML file inside a .ZIP carpet. this file must contain a head, a cuff and a page. The information contained on the website is free and must contain images that illustrate the article.

```html
<!doctype html>
<html lang="en">
  <head>
    <meta charset="utf-8">
    <meta http-equiv="X-UA-Compatible" content="IE=edge">
    <title>Example</title>
  </head>
  <body>
    <p>See info about <a href="">dogs</a> or
    <a href="">cats</a></p>
  </body>
</html>
```

- This first activity must contain the elements indicated in the image and will form part of the successive activities.
- Information for the design of this page can be found at https://www.w3schools.com/.

A. It must contain a logo that can be selected from any image that represents the content

B. The URL will be different from what the file is contained in the PC. However, the index.html name will appear in that Asian space as the directory c: /...

C. The header contains the basic navigation elements, such as logos, navigation brows and short texts.

D. The body of the content must be made up of 1 but the same images as the text, the formatting of the content can be linear, that is, text followed by image, the combination is between text and image from the side. Other combinations are also valid.

E. In the page of the page appearing firms of the page designer, regulations and auxiliary links that represent a secondary content on the page.

- To build this .html file, you must install a text editor such as sublime, notepad ++, etc. by default, windows contain a call block text editor.

- The files created must be presented in a carpet compressed with the name of project.Web or project.
